- Ceramic plates for smooth gliding and shiny hair
- Prevent hair breakage with floating plates
- Faster, yet more caring with high-performance heater
- Instant heat-up time of 15secs
- 200°C caring temperature for beautiful results

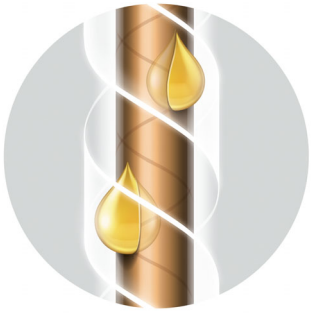
PHILIPS

Highlights

Conditioning ingredients

The conditioning ingredients released by the Care Infusion Covers (Argan oil, Camellia oil, Avocado oil and Vitamin E) are activated by the heat from the straightener. This noticeably increases softness and shine* as well as preserving strength. *Tested on 60 women in France, 2013.

Heat protection of each strand



The innovative Care Infusion Covers create a protective shield against heat damage while straightening. They have been designed to last for approximately a month**. **Average straightener use, 10 uses.

Innovative straightening

No compromise: ActiveProtect always offers perfect styling results with a caring temperature of 200C***. The straightener can be used without the covers thanks to floating ceramic plates. *** In-use temperature, IEC measurement: 220°C.

Care Infusion covers

The Care Infusion covers are easy to put in place. They are built on innovative technology, combining knowledge of hair and material properties. The heat of the straightener will activate the covers, releasing ingredients. Thanks to the natural straightening motion, the conditioning ingredients will be applied to the hair. The decoration on the covers is an Empty Indicator. Once it has faded away, the covers need to be replaced (in average a month or 10 applications).

Easy cover release

Covers are easy to insert and detach thanks to release sliding buttons on the side of the straightener.

Straighten with/without cover

You can choose to style your hair with or without covers.

Soft storage ring

The special soft storage ring has multiple benefits, the most important being that it is made of silicon-rubber, a heat-resistant material. After usage, slide the ring on your straightener to enable safe storage. It will also protect your Care Infusion covers and straightening plates from scratching as well as locking your straightener while stored.

Ceramic plates

Ceramic plates for smooth gliding and shiny hair.

Floating Straightening Plates

The floating plates move, when too much pressure is applied during straightening. This protects the hair shaft from being damaged and therefore avoids overall hair breakage.

High-performance heater

Faster, yet more caring with high-performance heater
